Decoking Technology Decoking systems are industrial equipment used in refineries and petrochemical plants to remove coke deposits that accumulate on the internal surfaces of processing equipment, such as reactors, furnaces, and heat exchangers, during high-temperature operations. These systems employ mechanical, chemical, or thermal methods to break up and remove the coke buildup, restoring the efficiency and operational integrity of the equipment. Mechanical decoking systems typically utilize high-pressure water jets or rotating cutters to dislodge the coke, while chemical decoking systems involve the use of specialized solvents or chemical agents to dissolve the coke deposits. Decoking systems play a crucial role in maintaining the productivity and reliability of refining and petrochemical processes by ensuring equipment performance and minimizing downtime for maintenance.

The global Decoking Technology market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
