The global Decoking Valves market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

This single valve controls the flow from the high-energy jet pump and provides three distinct functions: Recirculation (bypass) flow control for pump protection. Pre-fill of decoking lines and hoses at a predetermined flow rate to prevent water hammer.

Oil and gas companies are focusing on improving operational efficiency and reducing costs. Technologies such as data analytics, artificial intelligence, and automation are being employed to optimize production, enhance asset performance, and streamline operations. Energy efficiency measures are also being adopted to reduce environmental impact and improve sustainability. The oil and gas industry is witnessing a shift in investment priorities. Companies are increasingly allocating capital towards projects with shorter payback periods, lower breakeven costs, and higher returns on investment. This includes investments in unconventional resources, offshore deepwater projects, and natural gas developments.
