The global Deep Hole Drilling Machinery market size is predicted to grow from US\$ 211 million in 2025 to US\$ 241 million in 2031; it is expected to grow at a CAGR of 2.3% from 2025 to 2031.

Deep hole drilling machinery is a type of machine tool used to create deep holes in various materials, such as metal or plastic. It is commonly used in industries such as aerospace, automotive, and oil and gas.

Deep hole drilling machinery is designed to drill holes with a high length-to-diameter ratio, typically greater than 10:1. These machines are capable of drilling holes with diameters ranging from a few millimeters to several centimeters, and depths ranging from a few centimeters to several meters.

The drilling process in deep hole drilling machinery involves rotating a cutting tool, such as a drill bit or a gun drill, while simultaneously feeding it into the workpiece. The cutting tool is cooled and lubricated with a cutting fluid to dissipate heat and remove chips from the hole.

Deep hole drilling machinery can be operated manually or automatically, depending on the complexity of the drilling operation. Automatic machines are equipped with computer numerical control (CNC) systems that allow for precise control of the drilling process, including speed, feed rate, and depth.

United States market for Deep Hole Drilling Machinery is estimated to increase from

US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
