Deep machining Liquid Cold Plate are manufactured by creating a channel for liquid to flow by drilling a series of deep holes into an aluminium plate. The cold plate is manufactured from a single piece of aluminium that has not been through any thermal cycling and no thermal stress. This results in a manufacturing process that allows flatness to be achieved much easier. A significant benefit of gun-drilled cold plates is that they can maintain tighter tolerances than tubed cold plates, and have the advantage that there are no thermal boundaries.

The global Deep Machining Liquid Cold Plate market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
