The Deep Submergence System (DSS) is a collection of technologies and equipment used for exploring and studying the deep ocean. It includes various types of submersibles, remotely operated vehicles (ROVs), and autonomous underwater vehicles (AUVs) that are capable of operating at great depths.

These systems are designed to withstand the extreme pressure and harsh conditions of the deep ocean, allowing scientists and researchers to conduct a wide range of studies and experiments. They are equipped with advanced imaging and sensing technologies, as well as sampling and collection tools, to gather data and samples from the deep sea.

The DSS is used for various purposes, including geological and biological research, underwater archaeology, and the exploration of underwater resources. It has been instrumental in discovering and studying deep-sea ecosystems, hydrothermal vents, deep-sea corals, and other unique and important features of the deep ocean.
