The global Deep UV LED market size is predicted to grow from US\$ 781 million in 2025 to US\$ 9007 million in 2031; it is expected to grow at a CAGR of 50.3% from 2025 to 2031.

The UV-C LED emits ultraviolet light with short wavelengths ranging between 200–280 nm and is also called deep UV. In recent decades, ultraviolet (UV) disinfection has become an appealing technology in the global water treatment industry due to declines in UV equipment costs and increased concerns about chemical disinfection. Although UV disinfection typically employs a conventional mercury vapor lamp, a relatively new technology is poised to make that lamp a thing of the past: the UV-C light-emitting diode (LED). The UV-C LED operates in the so-called C range of the UV spectrum, with a wavelength from 100 to 280 nanometers. In this range, the radiation can effectively be used to sterilization, perform forensic analysis, cure materials and disinfect water, among many other applications.

Global core deep UV LED manufacturers include Crystal IS, NIKKISO etc. The top 2 companies hold a share about 40%. Asia Pacific is the largest market, with a share about 50%, followed by North America and Europe with the share both about 20%.
