Deep well plates and sealing mats are essential tools in laboratory settings, particularly in fields like molecular biology, biochemistry, and analytical chemistry. Deep well microplates are designed for specific use with absorbance, fluorescence, or luminescence testing methods for the most accurate results. Flat bottoms to give more surface area, round bottoms for mixing, or the best sample recovering conical bottom surfaces may come untreated or treated for specimen binding requirements. Sealing Mat is a laboratory tool mainly used to seal deep well plates (called deep well microplates or deep well plates) to prevent sample evaporation, contamination and cross contamination.

The global Deep Well Plates & Sealing Mats market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
