The global Deferasirox market size is predicted to grow from US\$ 3032 million in 2025 to US\$ 3987 million in 2031; it is expected to grow at a CAGR of 4.7% from 2025 to 2031.

Deferasirox is an oral iron chelator. Its main use is to reduce chronic iron overload in patients who are receiving long-term blood transfusions for conditions such as beta-thalassemia and other chronic anemias.

Deferasirox is marketed as Exjade, Desirox, Defrijet, Desifer, and Jadenu.

The half-life of deferasirox is between 8 and 16 hours allowing once a day dosing. Two molecules of deferasirox are capable of binding to 1 atom of iron which is subsequently eliminated by fecal excretion. Its low molecular weight and high lipophilicity allows the drug to be taken orally unlike deferoxamine which has to be administered by IV route (intravenous infusion). Together with deferiprone, deferasirox seems to be capable of removing iron from cells (cardiac myocytes and hepatocytes) as well as removing iron from the blood.

The major global manufacturers of Diltiazem are Novartis, Cipla, Natco Pharma and Sun Pharma, among which Novartis is the industry leader with a market share of around 99%. North America is the largest spending region, with 30 per cent of the market, followed by Europe with 25 per cent.
