Fluoride pollution of drinking water is related to health hazards, such as dental fluorosis and skeletal fluorosis. The high fluoride concentration in natural water may be caused by geological sources, such as leaching of fluorinated minerals in rocks and sediments, as well as anthropogenic sources, mainly due to the use of pesticides and industrial activities. Therefore, nowadays, fluoride pollution in drinking water is the main problem faced by all countries. Fluoride removal system can remove fluoride and fluoride in water, so as to use safe and assured water. There are many kinds of fluoride removal systems, including electrolytic fluoride removal, chemical fluoride removal, solar fluoride removal and herbal fluoride removal.
