Defoamer-Grade Silicone Oil is a functional silicone oil raw material used for the production of silicone-based defoamers. It mainly includes dimethyl silicone oil, hydroxy silicone oil, polyether-modified silicone oil, fluorosilicone-modified silicone oil and other types. Featuring low surface tension, good hydrophobicity, thermal stability and chemical stability, the product provides defoaming, foam suppression and auxiliary dispersion functions in defoamer formulations. It is an important base component for silicone oil-based defoamers, defoamer emulsions and compound defoamers.

The upstream of the Defoamer-Grade Silicone Oil industry chain mainly includes organosilicon monomers, DMC, dimethyl cyclosiloxane, end-capping agents, modified monomers, catalysts and fumed silica. The midstream consists of silicone oil and modified silicone oil manufacturers, which produce products with different viscosities, structures and formulation compatibility through polymerization, modification, compounding and quality control. The downstream mainly includes defoamer manufacturers, which further process the product through emulsification, dispersion or compounding to produce silicone-based defoamers, ultimately used in textile, papermaking, water treatment, food, chemical and other fields.

United States market for Defoamer-Grade Silicone Oil is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
