The global Defocus Lenses market size is predicted to grow from US$ 1794 million in 2025 to US$ 2809 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

Defocus lenses are divided into defocus soft lenses and defocus frame lenses. The principle of the defocus lens is to correct the hyperopic defocus around the retina through a special optical design, so that the peripheral image is also focused on the retina or in front, and the increase in the degree of myopia is controlled.

Myopia prevention and control products are developing rapidly, and the market space for defocus lenses is sufficient. After the epidemic, teenagers take online classes at home, use electronic products for a longer period of time, and reduce outdoor activities. The demand for myopia prevention and control products has grown rapidly. Among them, out-of-focus frame lenses can be sold in optical shops because of the low threshold for fitting them; the price is much lower than that of orthokeratology lenses, which is cost-effective and fully fills the gap in the market; it has a wide range of applications, is comfortable and safe to wear, and is easily popular among teenagers and parents. Accepted, the penetration rate is expected to increase rapidly.
