TPU is a thermoplastic polyurethane elastomer with excellent mechanical properties, abrasion resistance, cold resistance and chemical resistance. Breathable membranes are commonly used to make various types of waterproof, breathable and windproof products, such as outdoor clothing, footwear, backpacks, tents, etc.

Degradable TPU Breathable Membrane can be decomposed or degraded by microorganisms in the natural environment under certain conditions, thereby reducing the impact on the environment and promoting sustainable development. Such materials are typically achieved by incorporating biodegradable additives into the polyurethane base material or by choosing a specific polymerization method. The degradable TPU breathable film maintains the performance and functions of traditional TPU materials while being more environmentally friendly and suitable for application scenarios where environmental impact needs to be considered.

The global Degradable TPU Breathable Membrane market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
