Dehairing centrifuge is a specialized device used to remove fine hairs and impurities from animal hides and skins, widely applied in the meat processing and leather manufacturing industries. Utilizing centrifugal force generated by high-speed rotation, it separates hairs, dirt, and other impurities attached to hides and skins. Composed of a rotating drum, drive motor, filtration system, and control system, it features special linings and blades to effectively cut and remove hairs. During operation, animal hides and skins are placed inside the rotating drum, and as the drum spins at high speed, hairs and impurities are thrown off and collected in the filtration system, leaving the cleaned hides and skins inside. Efficient, energy-saving, and easy to operate, the Dehairing Centrifuge can process various sizes and types of hides and skins, ensuring a smooth, hair-free surface. Equipped with safety protection devices, it ensures safety and reliability during operation. The Dehairing Centrifuge is an indispensable device in meat processing and leather manufacturing processes.
