Dehydrated Media is a combination of complex nutrient substrates formulated for the cultivation of microorganisms. The components of dehydrated culture medium, must satisfy the nutritional requirements like nitrogen, carbon and trace elements of microorganisms, in order to live and replicate.

Culture media is of fundamental importance for most microbiological tests: to obtain pure cultures, to grow and count microbial cells, and to cultivate and select microorganisms. Without high-quality media, the possibility of achieving accurate, reproducible, and repeatable microbiological test results is reduced. A microbiological culture medium is a substance that encourages microorganisms' growth, support, and survival. Culture media contains nutrients, growth-promoting factors, energy sources, buffer salts, minerals, metals, and gelling agents. The development of the biomedical industry has promoted the development of the Dehydrated Media market.
