Delustrant refers to a chemical additive used in the production of synthetic fibers and textiles to reduce the luster or shine of the final fabric.

The market for Delustrants is driven by its applications in the textile and fiber industry. Delustrants are used to create matte or dull finishes in synthetic fabrics, reducing the gloss and reflection of light. The demand for Delustrants is influenced by the growth of the textile and apparel sectors and the need for specialized fabrics with specific visual properties. The continuous focus on textile finishing and consumer preferences for different fabric aesthetics may further influence market dynamics. Research and development in textile finishing and additive technologies contribute to market expansion and innovation.
