The global Demineralization Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Demineralization systems are widely used in industries such as power generation, pharmaceuticals, food and beverage, and electronics, where high-purity water is essential for processes. Stringent environmental regulations related to wastewater discharge and water treatment are encouraging industries to invest in effective demineralization systems. Ongoing advancements in demineralization technologies, including improved resin materials and regeneration methods, contribute to more efficient and cost-effective systems. In regions facing water scarcity, demineralization systems are crucial for recycling and reusing water, reducing the strain on freshwater resources.
