The global Demulsification Water Purifying Agent market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Demulsification water purifying agent is composed of non-ionic polyether. The product has multiple branch chains, excellent bridging flocculation ability, and can quickly connect oil droplets dispersed in water, and assemble and float, so that oil and water can be quickly separated. The product is widely used in the pretreatment process of oilfield produced liquid separator. It can act on two phases of oil and water, that is, it has two phase demulsification ability. The agent contains active components that can act on two kinds of emulsions: oil-in-water and oil-in-water, which can separate oil from water by reducing the tension of oil-water interfacial membrane, and can make oil droplets in sewage collect and float up by bridging and coalescence.

Demulsification water purifying agent is a kind of compound reagent specially suitable for the treatment of produced wastewater in the injection area of oil field. At the same time, the agent has the capacity of demulsification and dehydration, oil-water separation and flocculation purification, etc., with less dosage and good effect.
