A DeNOx Selective Catalytic Reduction (SCR) Reactor is a crucial environmental protection device used in industrial exhaust gas treatment to reduce the emissions of nitrogen oxides (NOx). It operates through Selective Catalytic Reduction technology, utilizing catalysts at an appropriate temperature to facilitate a chemical reaction between ammonia or urea as the reducing agent and NOx, converting them into harmless nitrogen gas and water vapor, thereby purifying the exhaust gas. The essence of this technology lies in its efficiency and selectivity, i.e., reducing NOx without adversely affecting other components in the exhaust. The purpose and significance of the DeNOx SCR Reactor are to meet increasingly stringent environmental regulations, reduce air pollution, and improve environmental quality. This reactor can achieve an NOx removal efficiency of over 90%, and due to its wide operational temperature window, it is highly adaptable to changes in boiler load. The use of a DeNOx SCR Reactor not only reduces environmental pollution but also helps enterprises achieve clean production, enhance corporate image, fulfill social responsibilities, and brings long-term environmental and economic benefits.
