Dense refractory brick refers to a type of high-temperature-resistant brick made from refractory materials, typically ceramic or mineral compositions. These bricks are designed to withstand extremely high temperatures, erosion, and thermal shock.

Dense refractory bricks are characterized by their high density, low porosity, and excellent thermal conductivity. They are commonly used in industrial furnaces, kilns, and other high-temperature applications where maintaining structural integrity and withstanding harsh and corrosive conditions is essential.

The dense refractory bricks are manufactured by compacting and firing refractory materials at high temperatures, resulting in a solid and durable structure. They can withstand temperatures ranging from several hundred degrees Celsius to several thousand degrees Celsius, depending on the specific composition and application requirements.

These bricks are used as lining materials to protect the inner walls of furnaces, kilns, and other heat-processing equipment. They provide insulation, prevent heat loss, and ensure the efficient and safe operation of high-temperature industrial processes.
