Densified Silica Fume is produced by treating the undensified silicon powder to increase the heap density to the maximum of 400 to 720kg/m. After densifying the micro-silicon powder, it is convenient to stir the concrete without affecting the fluidity of the micro-silicon powder. In the process of concrete production, the use of dense silicon powder is more conducive to even mixing, improve the comprehensive performance of concrete, at the same time, densified silica fume is also used in the manufacture of refractory materials and other products
