Additive manufacturing (AM), also known as 3D printing, are processes used to synthesize a three-dimensional object, in which successive layers of material are formed under computer control to create the object. Additive manufacturing (AM) is widely used in consumer electronics, automobile industry, aerospace, medical industry and industrial equipment etc. This report mainly studies dental additive manufacturing (AM), i.e., dental 3D printer is a medical device, which used in the dental industry professionally as for the professional dental industry such as dental restorations and orthodontists etc.

The concentration of dental additive manufacturing (AM) industry is relative high. The major production regions mainly locate in USA, Europe and Asia-Pacific etc. The high-end brands of dental additive manufacturing (AM) are mainly located in USA and Europe regions. In the past few years, the price of Dental 3D Printer shown a decreasing trend and we expect the price may keep the trend in a short period. However, with the upgrading of the product, improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of Dental 3D Printer. In the future, the price will present a up trends. Therefore, to some extent, the companies are facing a risk of profit decline. At present,

companies are focusing on technological innovation and process improvements, to reduce costs and improve quality. The competition in dental additive manufacturing (AM) market will become more intense.
