According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment. Factors such as increasing prevalence of oral diseases and rising awareness of oral health among people have resulted in increased visits to the dentist, thereby leading to growing demand for dental turbines over the forecast period. For example, in September 2021, out of a total of 14,319 dental visits, 5,671 in 2018, 5,036 in 2019, and 3,612 in 2020 occurred, according to the National Library of Medicine. The average (standard deviation) frequency of daily visits was 36.69 (15.64), 32.09 (15.51) and 24.24 (14.78), and this increase can be attributed not only to the growing demand for cosmetic dentistry but also for other dental procedures such as restorations and orthodontics. Technological advancements in dental turbine handpieces, rising awareness of oral health, and rise in dental diseases are also driving the market.
