The global Dental CAD and CAM Materials and Systems market size is predicted to grow from US\$ 3382 million in 2025 to US\$ 6296 million in 2031; it is expected to grow at a CAGR of 10.9% from 2025 to 2031.

Computer aided design and computer aided manufacturing (CAD/CAM) is used in digital dentistry to design and manufacture dental prosthetics and restorations. CAD involves the use of computer technology for design documentation, whereas CAM systems use models and assemblies created in CAD software to print 3D models of designed parts. CAD/CAM materials are used to manufacture customized dental prosthetics, which are unique for every patient. A variety of CAD/CAM systems have been applied to the total process for fabricating restorations. After the abutment teeth are prepared, the mainstream work-flow for conventional metal restorations is first obtained by taking an impression followed by model production, wax up, and then casting. Restorations are designed on a computer monitor using the CAD software based on the digitized data as a virtual wax-up.

The factors that drive the growth of the dental CAD/CAM materials and systems market include the rise in the prevalence of tooth loss, the growth in the number of edentulous people, the benefits of dental CAD/CAM-based restorations over dental lab restorations, technological developments in dental CAD/CAM systems, the expansion of dental service organizations, and the rise in the demand for advanced dental solutions. However, high maintenance costs, high price of CAD/CAM systems, and limited reimbursements constrain the market growth. Furthermore, the surge in demand for dental cosmetic procedures, the increase in disposable incomes, and the growth prospects in emerging markets in Asia-Pacific and LAMEA are expected to create lucrative opportunities in the industry. Based on product, the dental CAD and CAM

systems segment held the largest share in 2022, garnering more than half of the global dental CAD/CAM materials and systems market revenue, and is projected to maintain prominent revenue growth in 2030. Due to a rise in the demand for software that facilitates effective design, restoration, fit, and manufacturing of dental prosthetics.
