The global Dental Cone Beam Computed Tomography (CBCT) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Cone Beam Computed Tomography (CBCT) is an advanced imaging technology critical in modern diagnostics. Unlike traditional X-ray machines that produce two-dimensional images, CBCT creates detailed 3D images of the skeletal, dental, and soft tissue structures. It's named for the cone-shaped X-ray beam it uses, which rotates around the patient, capturing multiple images from different angles. These images are then reconstructed into a three-dimensional representation by sophisticated computer algorithms. This technology provides a comprehensive view of the patient's anatomy, offering invaluable insights for accurate diagnosis and treatment planning. Its precision and efficiency make it especially useful in specialized fields like dentistry, orthopedics, and radiology. CBCT's role is to elevate patient care standards, providing practitioners with a tool that is both innovative and reliable for a wide range of clinical applications.

Cone beam computed tomography (CBCT) is a medical imaging technique that uses X-rays to create highly accurate and detailed three-dimensional (3D) images of the inside of objects. These 3D images provide information that traditional X-rays cannot capture, allowing us to more accurately diagnose and treat problems. This may help with various dental procedures, including root canals and dental implants.
