The global Dental Crown Material market size is predicted to grow from US\$ 2345 million in 2025 to US\$ 3681 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Dental Crown Materials are restorative materials used to fabricate dental crowns, bridges, inlays, onlays and veneers through laboratory or chairside CAD/CAM workflows. Major materials include zirconia, lithium disilicate glass-ceramics, hybrid ceramics, resin composites, porcelain-fused-to-metal materials, dental alloys and temporary crown materials. In 2025, Global Dental Crown Material sales are estimated at about 1,120 Tons, with an average ex-works price of around 2,140 US\$/Kg. The value chain includes upstream zirconia powders, glass-ceramic powders, resin matrices, ceramic pigments, precious or cobalt-chromium alloys and sintering additives; midstream manufacturers of dental materials and CAD/CAM blocks or discs; and downstream users including dental laboratories, chairside CAD/CAM clinics, dental hospitals and denture-processing centers.

The market is driven by aging populations, restorative dentistry demand, esthetic dentistry, CAD/CAM adoption and chairside dentistry. Zirconia and lithium disilicate materials are replacing some porcelain-fused-to-metal crowns due to their strength, esthetics and digital manufacturing efficiency.
