Dental diode lasers, sometimes called soft-tissue lasers, are ideal for procedures that involve cutting or contouring oral soft tissues. As a clinical tool, diode lasers offer a wide range of clinical treatment possibilities as they are capable of creating precision cuts in gingiva and other soft tissues while also eliminating bleeding at the site and reducing the healing time for the patient. Soft tissue lasers are ideal for troughing around preparations, sterilizing endodontic canals, treating periodontal disease, and even tooth whitening. Many of the latest dental diode lasers are portable and easy to use with simple, touchscreen controls.
