Dental photon lasers are ideal for procedures that involve cutting or contouring the soft tissue of the mouth. As a clinical tool, soft-tissue diode lasers offer a wide range of clinical treatment possibilities, as they enable precise cuts in the gums and other soft tissues, while also eliminating bleeding at the site and reducing the healing time of patients. Photon lasers are ideal for grooving during preparation, sterilizing pulp canals, treating periodontal disease, and even teeth whitening. Many of the latest dental diode lasers are portable and easy to use with simple touchscreen controls.

The global Dental Photon Lasers market size is projected to grow from US\$ 240680 million in 2023 to US\$ 452560 million in 2030; it is expected to grow at a CAGR of 9.4% from 2024 to 2030.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment. The device offers several advantages over other tools and the global dental laser market is expected to grow. Since the laser utilizes high power and intensity of light energy and only affects the targeted area, there is little chance of bleeding after the procedure. It greatly reduces any pain associated with dental treatment and provides faster healing times after treatment. When surgery is performed with a dental laser, there is less damage to the surrounding tissue and the chance of infection is extremely low. The global market is expected to witness further growth owing to growing concerns over tobacco consumption, which greatly affects the oral health care of consumers. Smokers are more likely to develop untreated tooth decay, with more than 40 percent of adults ages 20 to 64 having untreated tooth decay, according to the U.S. Centers for Disease Control and Prevention (CDC). People over 65 have twice the risk of developing cavities. The global tobacco industry is worth \$850 billion by 2021. Dental lasers are likely to generate higher demand due to rising product innovation and faster introduction of new products in the market.
