The global Dental Radiography Systems market size is predicted to grow from US\$ 4410 million in 2025 to US\$ 6834 million in 2031; it is expected to grow at a CAGR of 7.6% from 2025 to 2031.

Dental Radiography Systems refers to the imaging equipment which use the radiography principle and used in the dental field. Dental Radiographs are commonly called x-rays. Dentists use radiographs for many reasons: to find hidden dental structures, malignant or benign masses, bone loss, and cavities.

A radiographic image is formed by a controlled burst of X-ray radiation which penetrates oral structures at different levels, depending on varying anatomical densities, before striking the film or sensor. Teeth appear lighter because less radiation penetrates them to reach the film. Dental caries, infections and other changes in the bone density, and the periodontal ligament, appear darker because X-rays readily penetrate these less dense structures. Dental restorations (fillings, crowns) may appear lighter or darker, depending on the density of the material.

In this report, Dental Radiography System includes Ordinary Radiography Systems, Panoramic Radiography Systems and Cone-beam computed tomography systems (CBCT).

Global Dental Radiography Systems key players include Sirona, Carestream, Danaher, Vatech, Planmeca, etc. Global top five manufacturers hold a share over 65%.

USA is the largest market, with a share over 30%, followed by Europe and Japan, both have a share over 45%.

In terms of product, Ordinary Radiography Systems is the largest segment, with a share over 65%. And in terms of application, the largest application is Hospitals, followed by Dental Clinic, Institution, etc.
