## Abstracts

The global Dental Restorative and Regenerative Material market size is predicted to grow from US\$ 875 million in 2025 to US\$ 1287 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Dental materials are fabricated materials used in dentistry practices. Dental materials are of different types and they have different characteristics which is related to their intended purpose. There are two major types of dental material, namely, restorative material and regenerative material. Restorative material can resume damaged teeth's original form and functioning while regenerative material regenerates the damaged parts of the teeth.

Increasing prevalence of dental diseases and trauma majorly drives the market growth during the forecasted period. According to the Oral Health Foundation, from 2010 to 2015 approximately 20% of the children were admitted to the hospitals due to tooth decay or caries. Moreover, according to the American Society for Nutrition in 2016, 47% of the adults in the U.S. had periodontal disease. Additionally, the rising healthcare expenditure, growing dental tourism and rising geriatric population fuels the market growth. However, lack of awareness followed by high cost of products will restrain the market growth.
