The global Dental Wastewater Treatment Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Dental comprehensive treatment table is the core equipment of the department of stomatology, which is composed of console, patient seat, oral light, spittoon, three-purpose spray gun, saliva suction device, high-speed and slow-speed mobile phone, ultrasonic cleaner and other accessories. The water supply of oral comprehensive treatment unit can be divided into three categories in terms of the water supply process: direct water supply from municipal tap water; centralized water supply after treatment of tap water; independent water supply by storing purified water in the water storage tank attached to the comprehensive treatment unit. The three-purpose spray gun, mobile phone, and ultrasonic cleaner attached to the treatment table are mostly supplied with water through the internal water channel of the treatment table or an independent water storage tank; the mouthwash is mainly supplied through the internal water channel of the treatment table. From the source of water supply, it can be divided into three types: tap water, treated water (including soft water, pure water) and distilled water.
