Dental zirconium oxide powder, also known as dental zirconia powder, is a dental material used in the fabrication of dental restorations such as crowns, bridges, and implants. It is made from zirconium oxide, a ceramic material that is highly resistant to fracture and offers excellent biocompatibility.

Zirconium oxide powder is widely used in dental restorations, such as crowns and bridges, due to its natural tooth-like appearance. With the growing focus on improving dental aesthetics, the demand for zirconium oxide powder is expected to increase. The global prevalence of dental disorders, such as dental caries and periodontal diseases, is increasing. This has led to an increased demand for dental restorations, which in turn drives the demand for zirconium oxide powder. The dental zirconium oxide powder

market is expected to witness significant growth in the coming years due to the increasing demand for aesthetic dental procedures, rising prevalence of dental disorders, advancements in dental technology, benefits of zirconium oxide powder, increasing dental tourism, and growing geriatric population.
