The global Denture Reline Materials market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Denture relining materials are used in dentistry to adjust the fit of a denture by reshaping its underside to better conform to the patient's gums. Over time, gums and bone tissue can change due to natural resorption or shrinkage, causing dentures to become loose and uncomfortable. Relining helps improve the fit and stability of the denture without needing to create an entirely new one.
