The deodorizing and disinfecting spray system is an environmental purification device that integrates spraying technology with the principles of disinfection and deodorization. The system uses high-pressure spraying or ultrasonic atomization technology to evenly spray deodorants and disinfectants into the air in the form of tiny droplets. These droplets can quickly spread and cover the entire space, effectively neutralizing or adsorbing odor molecules in the air, while killing or inhibiting harmful microorganisms in the air, thereby achieving the dual effects of deodorization and disinfection. The system is widely used in various places where air quality and sanitary conditions need to be improved.

The global Deodorant Disinfection Spray System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
