## Abstracts

The global Depolymerization Catalysts market size is predicted to grow from US\$ 1457 million in 2025 to US\$ 2340 million in 2032; it is expected to grow at a CAGR of 6.8% from 2026 to 2032.

In 2024, global depolymerization catalysts production reached approximately 156,770 ton, with an average global market price of around USD 9,500 per ton. A factory gross profit of USD 2,660 per ton with 28% gross margin. A single line full machine capacity production is around 1,200 ton per line per year. downstream demand is concentrated in plastic chemical recycling operators, petrochemical refinery, biomass processors and specialty material recovery. A zeolite supported metal oxide depolymerization catalyst is used to convert post-consumer PET bottles into purified terephthalic acid and ethylene glycol, resulting in recycled monomers used for a PET resin. Depolymerization catalysts are substances (chemical or biological) that speed up the breakdown of large polymer chains into their smaller building blocks (monomers or oligomers) for chemical recycling, creating valuable feedstocks or fuels, differing from thermal methods by offering higher selectivity and purity for circular economy goals.

United States market for Depolymerization Catalysts is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Depolymerization Catalysts is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
