Abstracts

According to this study, the global Dermatophytic Onychomycosis Therapeutics (DOT) market size will reach US\$ 8157 million by 2031.

Market growth is primarily driven by factors such as increase in the prevalence of fungal toe nail infections in the U.S. and Canada, and rising per capita healthcare expenditure across the globe. Easy application of nail paints is also expected to drive demand for dermatophytic onychomycosis drugs. However, adverse effects associated with anti-fungal drugs and lack of awareness about dermatophytic onychomycosis in Asia Pacific, Middle East and Africa, and Latin America are expected to impede growth of the global dermatophytic onychomycosis therapeutics market.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs. However, the industry also faces challenges such as stringent regulations, high costs of research and development, and patent expirations. Companies need to continuously innovate and adapt to these challenges to stay competitive in the market and ensure their products reach patients in need. Additionally, the COVID-19 pandemic has highlighted the importance of vaccine development and supply chain management, further emphasizing the need for pharmaceutical companies to be agile and responsive to emerging public health needs.
