The global Desalting and Buffer Exchange Resins market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Desalting and buffer exchange resins are materials used in biochemistry and molecular biology. Desalting resins help remove salt ions from a solution, especially after protein purification, enhancing sample purity. Buffer exchange resins facilitate changing the buffer solution around a biomolecule, enabling researchers to modify experimental conditions or prepare samples for downstream applications. These resins are crucial in processes like protein purification, ensuring a controlled environment for biochemical studies by adjusting salt concentration and buffer composition.
