The global Desiccant for Insulating Glass market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

The insulating glass desiccant is mainly applicable to the absorption of water in the insulating glass interlayer gas, and continuously absorbs the water entering the spacer layer during the service life of the insulating glass; Avoid glass fogging, keep the insulating glass smooth and transparent even at very low temperatures, improve the thermal insulation and sound insulation performance of the insulating glass, thus reducing energy consumption and fully extending the service life of the insulating glass. 3A molecular sieve has strong moisture absorption capacity and is used for gas purification treatment. Direct exposure to air shall be avoided during storage.
