The global Desiccant Dehumidification Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Dehumidify or dehumidification – literally means “pulling out or removing” the moisture/humidity from the air. The dictionary defines dehumidification as the process of removing atmospheric moisture.

Methods of Dehumidification

Dehumidification can be split into three methods, they are:

Air Conditioning – Dehumidification by increasing the total pressure or compressing the air

Desiccant Dehumidification (also known as Chemical Dehumidification) – In this method, a desiccant material or drying substance is introduced into the airstream to remove moisture

Mechanical Dehumidification (also known as Refrigerative Dehumidification) – It is the method of removing humidity by cooling the air to condense the water vapor

A desiccant dehumidifier is the most accepted system across industries for ensuring required humidity conditions. It is one of the most energy-friendly methods of dehumidification. A desiccant dehumidifier has an added advantage, it can function equally well at extremely low to very high levels of humidity without regeneration

problems and no changes in cycle control. Its versatility in performing in any type of application is unique among the methods of drying air.
