Abstracts

The global Designated Driver market size is predicted to grow from US\$ 6596 million in 2025 to US\$ 10974 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Designated Driver Service refers to a professional and paid service that provides qualified, experienced drivers to take over the driving task of a vehicle when the original driver is unable to drive safely due to factors such as drinking alcohol, physical fatigue, illness or other special circumstances. The service covers the whole process from the pick-up point to the designated destination, ensuring the safety of the original driver, passengers and the vehicle, and also abiding by relevant traffic laws and regulations. It is a flexible and practical travel guarantee service that helps solve the problem of safe travel after drinking or other situations where driving is not suitable, and avoids potential traffic risks caused by drunk driving or unfit driving.

The demand for designated driver service is derived from the increasing awareness of traffic safety and legal compliance among the public, as well as the frequent social occasions involving alcohol consumption, which makes more people realize the danger of drunk driving and the need for a safe alternative travel method after drinking. In addition, the growing number of car owners, the increase in long-distance driving and the needs of special groups (such as the elderly, the weak or those who are temporarily unfit to drive due to physical reasons) also further promote the demand for this service. The business opportunity of designated driver service lies in accurately grasping these rigid demands, filling the gap in the market for safe travel after drinking and special driving scenarios, and improving service quality and efficiency through standardized management, professional driver training and convenient booking channels. At the same time, expanding service scenarios such as long-distance designated driving, night-

time emergency designated driving and supporting services can further tap market potential and meet the diversified needs of users, thus achieving sustainable development in the emerging service industry.
