A desktop CNC milling machine is a small, high-precision computer numerical control processing equipment suitable for precision milling, engraving and cutting operations in a limited space. Compared with traditional large CNC milling machines, desktop CNC milling machines are smaller and easier to place on a workbench, laboratory or home workshop, but they also have the ability to automatically control tool paths through G-code or CAD/CAM software. It is commonly used to process materials such as metal, plastic, wood, resin, and is widely used in product prototype development, small batch production, education and training, and personalized creation. This type of equipment has become an important tool for makers, engineers, designers and teaching institutions to carry out innovative manufacturing due to its easy operation, relatively affordable price and low maintenance cost.

United States market for Desktop CNC Milling Machines is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Desktop CNC Milling Machines is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
