A desktop synthesizer is a compact and self-contained electronic musical instrument designed for sound synthesis and music production. Unlike larger synthesizers that feature built-in keyboards, desktop synthesizers typically lack a keyboard and are intended to be controlled via external MIDI controllers, sequencers, or computer software. Desktop synthesizers often feature a wide range of sound synthesis capabilities, including analog, digital, or hybrid synthesis methods, allowing users to create a diverse array of sounds, from classic analog tones to modern digital textures. These synthesizers typically come in a compact desktop format, making them portable and space-saving, ideal for home studios, professional studios, live performances, and on-the-go music production setups. Desktop synthesizers may also include built-in sequencers, arpeggiators, effects processors, and modulation options, providing users with powerful tools for sound design, composition, and performance.

The global Desktop Synthesizer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
