## Abstracts

The global Destructive Materials Testing Services market size is predicted to grow from US\$ 865 million in 2025 to US\$ 1301 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

To address the problems of product safety relying on design margins, unclear failure mechanisms, and a lack of extreme data for quality verification, destructive materials testing services have emerged. Since the establishment of modern industrial quality control systems, and with the increasing demand for in-depth research into the failure behavior of materials and components, destructive materials testing services have developed into a professional technical service encompassing various testing categories such as tension, compression, bending, shear, fatigue, and impact. Widely applied in aerospace, automotive, new energy, medical devices, construction engineering, and major equipment manufacturing fields, it accurately obtains critical performance data and failure modes such as material strength, plasticity, and toughness by applying extreme loads until the sample fails. This provides decisive evidence for product safety certification, life prediction, failure analysis, and standard setting.
