The global Desulfurization and Denitrification System market size is predicted to grow from US$ 958 million in 2025 to US$ 1761 million in 2031; it is expected to grow at a CAGR of 10.7% from 2025 to 2031.

The desulfurization and denitrification system is an environmentally friendly treatment device used to remove sulfur dioxide and nitrogen oxides from industrial waste gas, aiming to reduce the emission of atmospheric pollutants and meet the requirements of environmental regulations. The system usually includes desulfurization technologies such as wet, dry, and semi-dry methods, as well as denitrification technologies such as selective catalytic reduction and selective non-catalytic reduction. Through chemical reactions or physical adsorption, pollutants are converted into harmless or easy-to-treat substances, and are widely used in thermal power plants, steel smelting, cement production, waste incineration and other industries.

United States market for Desulfurization and Denitrification System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Desulfurization and Denitrification System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

Europe market for Desulfurization and Denitrification System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
