The global Desulfurization and Dust Removal System market size is predicted to grow from US\$ 830 million in 2025 to US\$ 1523 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

In 2025, global Desulfurization and Dust Removal System approximately 11,724 units, with an average global market price of around US\$ 72,384 per unit. Gross margin is about 47%. The cost is 38,363 usd. The Production is about 15,000 units.

Desulfurization and Dust Removal System refers to environmental control systems used in industrial boilers, power plants, chemical plants, and other combustion or flue gas emission systems. Their primary function is to remove sulfur dioxide (SO₂), dust, smoke, and particulate matter from flue gas using technologies such as wet or dry flue gas desulfurization (FGD), electrostatic precipitators (ESP), and baghouse filters. These systems reduce pollutant emissions to meet environmental regulations and are widely applied in coal-fired power plants, steel plants, cement plants, waste incineration, and chemical industries.

The future development of desulfurization and dust removal equipment includes high efficiency, low energy consumption, intelligent operation, modular design, and integrated solutions. Next-generation systems will incorporate automatic control, online monitoring, big data analytics, and remote management to enable continuous operation and optimized emissions. With stricter environmental regulations and the green transformation of industries, higher demands are being placed on desulfurization efficiency, dust collection accuracy, and reliability, while promoting combined use of wet, dry, and hybrid technologies to enhance overall system economy and environmental performance.
