The global Detachable Embolization Coil market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Detachable Embolization Coils are medical devices used for vascular interventional treatments, mainly used to block abnormal blood flow or control bleeding by embolization. Removable embolic coils are usually made of soft metal materials and can be accurately placed at the target location within the blood vessel. When the coil reaches the correct position, the doctor can separate it from the delivery catheter to complete the embolization process. The detachable design allows doctors to better control and adjust the placement of the coil, thereby improving the accuracy and safety of the treatment. This device is often used to treat aneurysms, arteriovenous malformations (AVMs) or other vascular-related lesions.
