A Dew Point Chilled Mirror Hygrometer is a highly accurate instrument used for measuring humidity in the air by determining the dew point temperature. It operates based on the principle of condensation. The hygrometer works by cooling a mirror surface (the chilled mirror) until dew or frost forms on it. The temperature at which this condensation occurs is known as the dew point temperature, which corresponds to the saturation point of the air.

Dew Point Chilled Mirror Hygrometers are sophisticated instruments used to measure

humidity by determining the dew point temperature. Their high accuracy and reliability make them valuable tools in various industries where precise humidity control and measurement are essential.
