Dew Point Instruments are instruments that can directly measure dew point temperature. Cool a mirror surface in the humid air of the sample until the moment when dew drops (or ice crystals) appear on the mirror surface, measure the average temperature of the mirror surface, which is the dew point (frost) temperature. It has high humidity measurement accuracy, but requires a highly smooth mirror surface, a highly accurate temperature control system, and a highly sensitive optical detection system for dew drops (ice crystals). The pipe that inhales the sample air must be kept clean during use, otherwise impurities in the pipe will absorb or release moisture and cause measurement errors.

The global Dew Point Instruments market size is projected to grow from US\$ 110 million in 2024 to US\$ 175 million in 2030; it is expected to grow at a CAGR of 8.0% from 2024 to 2030.
