Industrial compressed air and gas systems can suffer damage from water contamination directly or through the water subsequently freezing and expanding. Having water vapour in the air or gas can also affect process or product quality. With the dew point measuring equipment it is possible to determine the humidity, ambient, wet bulb and dew point temperature. Measurements up to 60 °C are possible with the dewpoint meter. The dewpoint meter can therefore be used universally because of its various measuring functions to determine the ambient conditions.

The global Dew Point Measuring Equipment market size is projected to grow from US\$ 94 million in 2023 to US\$ 162.1 million in 2030; it is expected to grow at a CAGR of 8.0% from 2024 to 2030.
