The global Dew Point Measuring Instrument market size is predicted to grow from US$ 110 million in 2025 to US$ 187 million in 2032; it is expected to grow at a CAGR of 8.0% from 2026 to 2032.

Industrial compressed air and gas systems can suffer damage from water contamination directly or through the water subsequently freezing and expanding. Having water vapour in the air or gas can also affect process or product quality. With the dew point measuring instrument it is possible to determine the humidity, ambient, wet bulb and dew point temperature. Measurements up to 60 °C are possible with the dewpoint meter. The dewpoint meter can therefore be used universally because of its various measuring functions to determine the ambient conditions.

The energy industry has stringent requirements for monitoring air humidity and dew point, especially when it comes to the transportation, storage and handling of gases and liquids. Dew point measurement equipment is widely used in petroleum, natural gas and chemical industries. In industrial production, it is necessary to control the humidity and dew point in the air to ensure the stability of the production process and product quality. Therefore, there is a greater demand for dew point measurement equipment in the industrial field. With the increasing awareness of environmental protection, the monitoring requirements for atmospheric humidity and dew point are also increasing. Meteorology, environmental protection and other fields require the use of dew point measurement equipment to monitor and analyze atmospheric humidity and dew point. These factors together drive the growth and development of the dew point measuring equipment market.
