The global Dextrins market size is predicted to grow from US\$ 2797 million in 2025 to US\$ 3634 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

Dextrin is a water-soluble polysaccharide produced by the hydrolysis of starch. Dextrins can be made from almost any starch source, like corn, wheat or potatoes. In this report, we categorize the market into Maltodextrin and Cyclodextrin.

Dextrins are polysaccharides formed by heating dry or acid-modified starches in a process called pyrolysis. They can be used at higher solids levels than native or modified starches, creating stronger bonds, more tack and faster-drying properties than pastes made from unmodified starch. (Description by Cargill Company)

Major global dextrin manufacturers include Qinhuangdao Lihua, Zhucheng Dongxiao, Grain Processing Corp and Roquette. The world's top four manufacturers collectively occupy about 20% of the market share. The Asia-Pacific region is currently the world's largest dextrin market, accounting for approximately 37% of the market. The second and third are Europe and North America, which together account for more than 56%.
